**ABBREVIATED ACUTE DERMAL IRRITANCY / CORROSIVITY STUDY OF
IN RABBITS
Study No. 1203
Test Article No. 507**

SUMMARY

was applied for 4 hours to the shaved backs of three female rabbits at a dose of 0.5 ml. Residual test article was removed by rinsing with 0.9% saline solution. All test sites were examined for signs of dermal irritation (i.e. edema, erythema and/or eschar formation) and corrosivity (i.e. ulceration and/or necrosis) 30-60 minutes, and 24, 48, and 72 hours following removal of the wrappings.

The irritation score ranged from 1.7/8.0 at 30-60 minutes following unwrapping to 1.0/8.0 at 72 hours. The Primary Dermal Irritation Score for was 1.3.

No signs of dermal corrosivity were seen in any rabbit during the study.

STUDY PARTICIPANTS:

Christopher Lord, Senior Technician
