DCN: 8EHQ-09-17419**

Dear TSCA Declassification Coordinator:

In response to Mr. Sherlock's electronic mail request of March 16, 2011 regarding confidentiality claims for the identity of the chemical substance that was reported under TSCA Section 8(e) dated February 24, 2009, BASF Corporation hereby withdraws all claims of confidentiality made with respect to the Section 8(e) report in question.

Please note that this withdrawal of confidentiality is intended only to allow EPA to reveal to the public the information that was claimed confidential at the time of the report in question. BASF Corporation is not relinquishing any property rights in the study in question.

Attached is a public version of the document (copy of the original submission), with the declassified data circled and document control number (DCN) identified.

If you have any questions regarding this letter, please contact Janet Cerra at (973) 245-6693.

Sincerely,
Janet Cerra

Subject: Notice in Accordance with Section 8(e): Results of a Combined Repeated Dose Toxicity Study with the ~~Reproduction/Developmental Toxicity Screening Test in Wistar Rats with~~ N,N,N',N'-Tetrakis(2-Hydroxypropyl)Ethylendiamine (CAS No. 102-60-3)

Dear Sir/Madam:

BASF Corporation is submitting results of a Combined Repeated Dose Toxicity Study with the ~~Reproduction/Developmental Toxicity Screening Test in Wistar Rats according to OECD Guideline 422 with~~ N,N,N',N'-Tetrakis(2-Hydroxypropyl)Ethylendiamine (CAS No. 102-60-3), conducted by BASF SE, Ludwigshafen, Germany. The substance is used as cross-linking agent and catalyst in polyurethane coatings and rigid foams.

The study was carried out for Joint Inerts Task Force, Cluster Support Team 15 (1156 15th St. NW Suite 400, Washington DC 20005, USA).

The purpose of this study was to provide information ~~on the possible health hazards that may result from repeated exposure of male and female rats to~~ N,N,N',N'-Tetrakis(2-Hydroxypropyl)Ethylendiamine (CAS # 102-60-3) beginning before cohabitation, through mating and continuing for at least 28 days (male rats) or through parturition until day 4 of lactation (female rats). This repeated dose study incorporates a reproduction / developmental toxicity screening test that can be used to provide initial information on possible effects on male and female reproductive performance (e.g., gonadal function, mating behavior, conception, development of the conceptus and parturition). The study also places emphasis on neurological effects as a specific endpoint and should identify the neurotoxic potential of a test substance, which may warrant further in-depth investigation.

The test-substance preparations were oral administered to groups of 10 male as well as 10 female animals at dose levels of 1000, 300 and 100 mg/kg body weight/day by gavage.

Page 2

Male as well as female rats were dosed for 14 days as a pre-mating period, followed by 14 days administration during mating. Thereafter, parental males were sacrificed and examined according to the test guideline OECD 422. The parental females were allowed to deliver and to rear their pups up to day 4 post partum (p.p.) and were sacrifice and examined thereafter. Additionally, on day 4 p.p., all pups were sacrificed and examined according to the above-mentioned test guideline.

In the **brain**, different sized vacuoles were observed in the epithelial cells of choroid plexus in parental males and females of the high dose groups, as shown in the following table:

	Male animals				Female animals			
Dose group (mg/kg Body weight/day)	0	100	300	1000	0	100	300	1000
Number of animals	10	10	10	10	10	10	10	10
Vacuoles, choroid plexus	0	0	0	10	0	0	0	10
• minimal				1				2
• slight				3				2
• moderate				6				6

BASF Corporation understands that reporting of results from this study under TSCA 8(e) is in accordance with EPA's policy.

Please note that a sanitized version of this letter is enclosed, treating the chemical identities as confidential business information.

The information considered confidential is highlighted, in accordance with U.S. EPA policy. The non-confidential name can be referred to as "Substituted Aminopropanol."

A confidentiality substantiation questionnaire is being submitted for this substance.

Please send all correspondence related to this submission to the attention of Janet Cerra. If you have any questions, please call (973) 245-6693.

Sincerely,

Janet Cerra

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: Use only the printed original label for shipping. Using a photocopy of this label for shipping purposes is fraudulent and could result in additional billing charges, along with the cancellation of your FedEx account number.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide, available on fedex.com. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations found in the current FedEx Service Guide apply. Your right to recover from FedEx for any loss, including intrinsic value of the package, loss of sales, income interest, profit, attorney's fees, costs, and other forms of damage whether direct, incidental, consequential, or special is limited to the greater of \$100 or the authorized declared value. Recovery cannot exceed actual documented loss. Maximum for items of extraordinary value is \$500, e.g. jewelry, precious metals, negotiable instruments and other items listed in our Service Guide. Written claims must be filed within strict time limits, see current FedEx Service Guide.
